A Short-Duration/High Yield Alternative

The Horizons Active Floating Rate Senior Loan ETF (“HSL”) seeks to provide unitholders with a high level of current income by investing primarily in a diversified portfolio of U.S. senior secured floating rate loans, generally rated below investment grade and debt securities, with capital appreciation as a secondary objective.

What Are Senior Loans?

Senior loans are a secured form of debt typically issued by non-investment grade issuers, where a loan is protected by a legal claim to the borrower’s assets above all other non-secured debt obligations. Issues typically have a three-month or six-month floating rate coupon. Senior loans are also commonly known as secured loans, senior secured loans, leveraged loans, floating rate loans and bank loans.

Within a firm’s capital structure, senior loans rank higher than high-yield bonds, preferred shares and common equities. In the event of default, they offer a much higher recovery rate because of the added protection from their secured nature.

Senior loans are not a cash alternative. They are a non-investment grade fixed income investment and should be part of a balanced fixed income portfolio, not an alternative to it.
