

CNCL

Horizons Enhanced Canadian Large Cap Equity Covered Call ETF

LIGHT LEVERAGE, BIG OPPORTUNITIES

Horizons Enhanced Canadian Large Cap Equity Covered Call ETF (CNCL) is a covered call ETF that gives investors lightly levered exposure to the Canadian large-cap equities and uses a covered call strategy to help generate additional income on the portfolio.

Canada's largest and most liquid companies typically trade on the Toronto Stock Exchange, with many offering some level of income through dividend yield. A covered call strategy is a way to potentially further increase that income stream through the use of covered calls that can help generate a premium.

INVESTMENT OBJECTIVE:

CNCL seeks to provide, to the extent reasonably possible and net of expenses: (a) exposure to the performance of the large-cap market segment of the Canadian equity market; and (b) high monthly distributions of dividend and call option income. To generate income, CNCL will be exposed to a dynamic covered call option writing program.

CNCL will also employ leverage through cash borrowing and will generally endeavour to maintain a leverage ratio of approximately 125%.

Horizons Enhanced Canadian Large Cap Equity Covered Call ETF

Key Features

WHY CHOOSE CNCL?

Monthly Income: It is anticipated that CNCL will make distributions to its unitholders on a monthly basis.

Canadian Large-Cap Exposure: CNCL provides enhanced exposure to the largest and most liquid stocks listed in Canada.

The Covered Call Advantage + Leverage: CNCL's Underlying ETF (Horizons Canadian Large Cap Equity Covered Call ETF) uses a dynamic call writing approach, which seeks to generate income and reduce downside risk. CNCL employs 1.25x leverage, which can potentially magnify performance, relative to the performance of the Underlying ETF.

Call Premium Taxation: Call premiums generated by CNCL's covered call strategy are taxed as capital gains, which is traditionally considered the most efficient form of investment taxation for investors.

HOW CNCL WORKS

The mechanics behind how CNCL works are relatively simple. CNCL invests in the Horizons Canadian Large Cap Equity Covered Call ETF (the "Underlying ETF" or "CNCC"). CNCC seeks to provide, to the extent possible and net of expenses: (a) exposure to the performance of the large-cap segment of the Canadian equity market; and (b) monthly distributions of dividend and call option income. To mitigate downside risk and generate income, CNCC will employ a dynamic covered call option writing program. CNCL will invest entirely in CNCC, and then use cash-borrowing to enhance the exposure to CNCC by 1.25x. This use of light leverage could enhance the potential return profile generated by the Underlying ETF.

MAGNIFYING PERFORMANCE WITH LIGHT LEVERAGE

With CNCL's 1.25x leverage, exposure to the performance of the large-cap market segment of the Canadian equity market is magnified by 25% - resulting in potentially larger gains or losses relative to the Underlying ETF.

CNCL's light leverage can also potentially boost the annualized yield relative to the Underlying ETF since a higher amount of options premium can potentially be generated. However, leverage can also magnify negative performance when the Underlying ETF falls.

Horizons Enhanced Canadian Large Cap Equity Covered Call ETF

Leverage

Horizons ETFs offers four ways to get exposure to large-cap market segment of the Canadian equity market: the Horizons S&P/TSX 60™ Index ETF (HXT), Horizons Enhanced S&P/TSX 60 Index ETF (CANL), the Horizons Canadian Large Cap Equity Covered Call ETF (CNCC), and the Horizons Enhanced Canadian Large Cap Equity Covered Call ETF (CNCL).

Commissions, management fees and expenses all may be associated with an investment in exchange traded products managed by Horizons ETFs Management (Canada) Inc. (the "Horizons Exchange Traded Products"). The Horizons Exchange Traded Products are not guaranteed, their value changes frequently and past performance may not be repeated. Certain Horizons Exchange Traded Products may have exposure to leveraged investment techniques that magnify gains and losses and which may result in greater volatility in value and could be subject to aggressive investment risk and price volatility risk. Such risks are described in the prospectus. The prospectus contains important detailed information about the Horizons Exchange Traded Products. **Please read the relevant prospectus before investing.**

CANL and CNCL (or the "Enhanced ETFs") are alternative mutual funds within the meaning of NI 81-102, and are permitted to use strategies generally prohibited by conventional mutual funds, such as the ability to invest more than 10% of the Enhanced ETF's net asset value in securities of a single issuer, the ability to borrow cash and to employ leverage. While these strategies will only be used in accordance with the applicable investment objectives and strategies of the Enhanced ETFs, during certain market conditions they may accelerate the risk that an investment in Units of such Enhanced ETF decreases in value.

Effective June 24, 2022, the investment objectives of the Horizons Canadian Large Cap Equity Covered Call ETF ("CNCC") (formerly Horizons Enhanced Income Equity ETF ("HEX")), were changed following receipt of the required unitholder and regulatory approvals. The new tickers began trading on the TSX on June 27, 2022. For more information, please refer to the disclosure documents of the ETFs at www.HorizonsETFs.com.

Horizons Total Return Index ETFs ("Horizons TRI ETFs") are generally index-tracking ETFs that use an innovative investment structure known as a Total Return Swap to deliver index returns in a low-cost and tax-efficient manner. Unlike a physical replication ETF that typically purchases the securities found in the relevant index in the same proportions as the index, most Horizons TRI ETFs use a synthetic structure that never buys the securities of an index directly. Instead, the ETF receives the total return of the index through entering into a Total Return Swap agreement with one or more counterparties, typically large financial institutions, which will provide the ETF with the total return of the index in exchange for the interest earned on the cash held by the ETF. Any distributions which are paid by the index constituents are reflected automatically in the net asset value (NAV) of the ETF. As a result, the Horizons TRI ETF receives the total return of the index (before fees), which is reflected in the ETF's share price, and investors are not expected to receive any taxable distributions. Certain Horizons TRI ETFs (Horizons Nasdaq-100[®] Index ETF and Horizons US Large Cap Index ETF) use physical replication instead of a total return swap.

The payment of distributions, if any, is not guaranteed and may fluctuate at any time. The payment of distributions should not be confused with an Exchange Traded Fund's ("ETF") performance, rate of return, or yield. If distributions paid by the ETF are greater than the performance of the ETF, distributions paid may include a return of capital and an investor's original investment will decrease. A return of capital is not taxable to the investor, but will generally reduce the adjusted cost base of the securities held for tax purposes. Distributions are paid as a result of capital gains realized by an ETF, and income and dividends earned by an ETF are taxable to the investor in the year they are paid. The investor's adjusted cost base will be reduced by the amount of any returns of capital. If the investor's adjusted cost base goes below zero, investors will realize capital gains equal to the amount below zero. Future distribution dates may be amended at any time. To recognize that these distributions have been allocated to investors for tax purposes the amounts of these distributions should be added to the adjusted cost base of the units held. The characterization of distributions, if any, for tax purposes, (such as dividends/other income/capital gains, etc.) will not be known for certain until after the ETF's tax year-end. Therefore, investors will be informed of the tax characterization after year-end and not with each distribution if any. For tax purposes, these amounts will be reported annually by brokers on official tax statements. Please refer to the applicable ETF distribution policy in the prospectus for more information.
